

UNIQUE ADVANCED SAND THERAPY CONSULT GROUP

Dr. Eliana Gil and Dr. Dee Preston Dillon

We are pleased to offer this opportunity to sand therapy practitioners who have been practicing sand therapy a minimum of three years, and who want the opportunity to take an in-depth clinical look at sand scenes, with a guiding question presented to group participants. Drs. Gil and Preston-Dillon are like-minded professionals who view sand therapy symbols and process from diverse perspectives. Together, they provide an exciting and robust ability to view the sand therapy process of children, adults, and families from a transtheoretical perspective. The unique aspects of this consult group include:

- *A clinically-driven, not didactic focus to explore therapist experiences of sand scenes;*
- *Allow for professional dialogue;*
- *Encourage layered learning through a multi-theory conceptualization;*
- *Discuss ethics and cultural skill-building, prioritizing sand as a projective process;*
- *Opportunity to deepen our understanding of how countertransference provides connection and boundaries; Experience and tolerate not knowing, staying in the question, mindful presence with the metaphors.*
