

Pizza Directions

Preheat oven to 400 degrees

Spread the marinara, add the cheese, spread the toppings evenly

Put pizza on a baking sheet

Depending on the type of oven you have it should take about 6-10 minutes. If you like it crispier feel free to add more time. The dough is pre-cooked, so it cooks fast!

For gluten free crust: The gluten free crust takes a little longer. It is best to put the dough in the oven with no toppings or sauce first for 5 minutes. Then top the pizza, and give it another 3 or 4 minutes to melt the cheese

Fun tip! For a cool parmesan crusted crust, you can add grated parmesan around the edges when you add your toppings! Feel free to add any veggies or proteins on your pizza that you have in your fridge! I would recommend if you are adding steak or chicken to make sure its cooked before it goes on the pizza because our crust is thin and cooks fast.
