**B. ILLUMINATED MENU BOARDS**

Quality design and meticulous engineering are our strengths. There are many seen and unseen details that make for a durable and easy to use system. Price carrier system eliminates the need for price cross-outs and patches. We supply you with extra number sets. Face off system for super-easy transparency changes. No board disassembly required. Unibody construction affords ultra-rigid chassis that holds the panels in place. Multiple chassis are interlocked and then bolted resulting in a menu system that looks and functions like one piece. Slope system changes item strips in seconds without removing any part of the menu board. The slope allows you to easily glide a strip on and off. Powerful illumination means our menu systems are bright and evenly lit. They utilize an amplified light transmission technology. Lift and drop face to replace the bulbs or perform other maintenance chores easily. Just lift the cover and remove the whole face. When you're done, you place the face back in and let it drop. Fast, simple and easy.

Professional mandolin frame and safety guard/pusher made of heat-resistant, non-porous composite fiberglass. The blades are crafted from high carbon stainless steel. The mandolin’s slicing blade has both a straight edge and a serrated edge. The safety guard or pusher protects your hands from the blade. The julienne blades create vegetable sticks of various widths. The stainless steel guiding plate, located on the upper section of the mandolin, adjusts to vary the thickness of slices.

A. RAPI-KOOL® PLUS COLD PADDLES
Units help rapidly chill food through the temperature danger zone. The FDA stipulates that cooked food must be taken to 70°F (21°C) in two hours, and from 70°F (21°C) to 41°F (5°C) or below within an additional four hours. Integrated hanging hook. No freezing time required; wide mouth gives you the option to fill and refill with ice and water. Polycarbonate construction. Dishwasher safe. Innovative Fill-Rite™ design eliminates looking for the fill line - simply fill Rapid-Kool™ Plus with water, screw on the top, and freeze. Separate handle caps guarantee ice expansion areas, eliminating the stress caused by over-filling.

G. FRIDGE-KARE AIR FILTER
Keep walk-in and reach-in coolers fresh and efficient with the Fridge-Kare filter. The filter controls air quality by reducing the relative humidity in the cooler, which results in a lower average temperature. The filter also reduces mold and bacteria generation and eliminates or greatly reduces odors that can contaminate foods. By reducing the relative humidity, the shelf life of foods is extended and energy consumption decreases. Easy to use filter hangs inside a mesh bag held by a cardboard header that attaches to the shelving in the cooler. Each filter treats 250 cubic feet up to 6 months. Use this formula to measure cooler capacity and determine the number of filters needed: (Depth x Width x Height) divided by 1728 = number of filters needed.

B. NAPKIN WRAPS
Use napkin wraps to securely hold cloth or paper napkins around silverware. The ends of each wrap stick to each other and not the napkin. Silverware left sitting in plastic bins and dishwasher holders are subject to contamination from every direction. Wrapping silverware in napkins helps decrease the risk of contamination before use.
